you'll find Avanade.

INFRASTRUCTURE TRANSFORMATION SOLUTIONS

Innovation builds business.

Transformation *GETS YOU THERE.*

Create operational efficiencies that return dollars today and long-term value tomorrow.

- Upgrade or migrate your technology platforms to support business critical needs in order to remain effective and responsive.
- Build a highly robust infrastructure to support the development of business applications.
- Lower the ongoing cost of infrastructure support for enterprise applications by migrating to lower-cost, easy-to-maintain Microsoft Windows® operating systems.
- Centralize, consolidate, and standardize hardware to reduce server count.
- Free up valuable resources so you can focus on business-building rather than just business continuity.
- Establish data center operational processes, including patch management, that substantially reduce security risks.
- Lower management and administrative costs by centralizing ID creation, workflow, and more with Microsoft Active Directory®.

Doing more with less isn't a cliché. With our help, our customers make that a reality every day. You may be dealing with a technology platform that isn't performing to its true potential. Your infrastructure may not support the applications you need. Or, you might be anticipating an upgrade that requires a predictable outcome.

With any of these challenges, Avanade® can help you make your current and existing infrastructure investments perform beyond your expectations. The result: superior infrastructure providing reduced cost of ownership and better return on investment dollars.

It's more than pulling software off a shelf or hiring a consulting team.

Avanade Infrastructure Transformation experts are equipped with the experience and tools you need to get more from the systems that run your business.

→ Platform Migration

Smoothly upgrade from retiring systems, migrate from non-Microsoft® platforms, or upgrade to the latest Microsoft operating system to gain scalability and efficiencies beyond those you realize today.

→ Server Consolidation

Maximize resources that are under-utilized. Increase reliability and centralize administration while cutting long-term server costs.

→ Data Center Operations

Evaluate processes and infrastructure design to more efficiently manage operations and reduce costs while increasing predictability. Unshackle your budgets from the maintenance costs that are consuming capital which could be better utilized for innovation.

→ Enterprise Directories

Deploy an enterprise-wide business directory to lower administrative costs, simplify application integration, coordinate end-user accounts, and reduce development costs.

→ Desktop Deployment

Transition smoothly to a consistent, more manageable desktop environment. Execute large-scale desktop deployments on time, on budget, and without productivity or data loss.

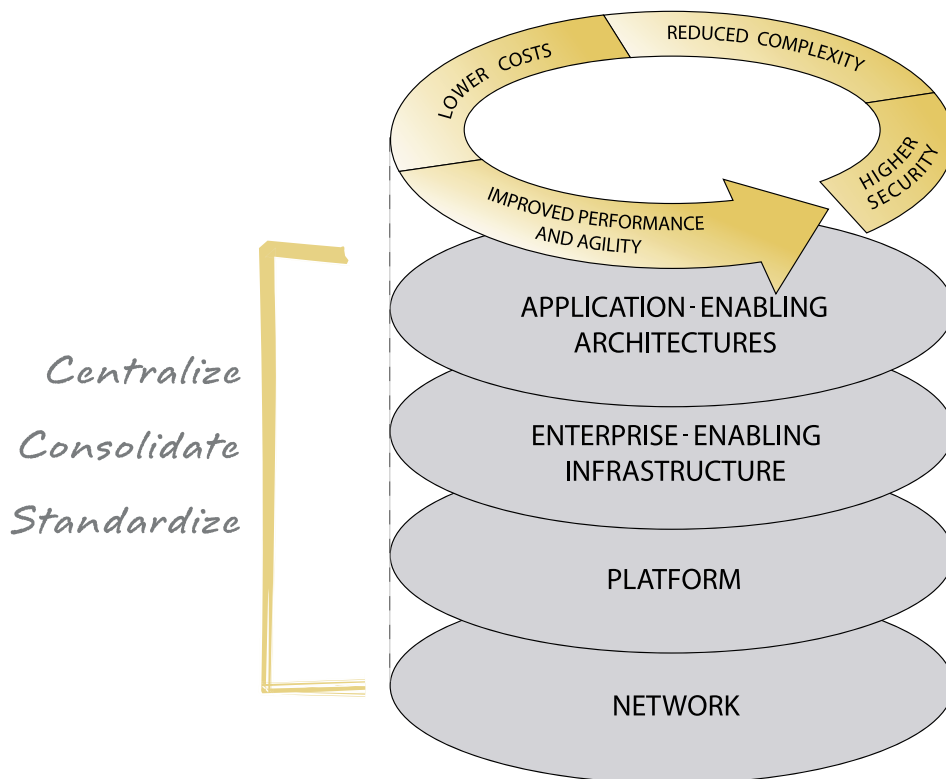

→ Enterprise Messaging

Improve e-mail functions, centralize messaging, introduce live collaboration, and create shared workspaces by implementing Microsoft® Exchange. Seamlessly migrate from a legacy e-mail system or upgrade to the latest version of Exchange to meet your business needs.

You support your systems and the people who use them.

We build the next-generation infrastructure to support you.

- ⇒ Move quickly and efficiently to new technologies with minimal risk and controlled investment.
- ⇒ Take a holistic approach when addressing the systems that run your business to gain value-based returns.
- ⇒ Empower the enterprise applications your people use to serve customers, partners, and more.
- ⇒ Improve infrastructure architectures to streamline operations.

Holistic Approach = Operational Efficiency

start ahead with **ACA[®] Infrastructure**

Proven solutions are born of discipline, insight, and a passion for building things right. Avanade delivers this advantage to its customers through a toolset called the Avanade Connected Architecture[®] for Infrastructure or *ACA Infrastructure*.

Built by the industry's leading technologists, these technical components can remove hundreds of days from standard timelines. Not to mention reduced risk and the value of getting it done right the first time.

Wise Infrastructure Investors

Smart business decisions are based on value, which normally includes a discussion of dollars. But, as leading CIOs and their organizations have found, cost savings are not the only element of improving critical assets such as infrastructure. Our customers are finding even greater value with the efficiencies and solution benefits we offer.

Our team members work with new Microsoft technologies well before they are released to the public. Our people have deep relationships with technology providers as well as daily collaboration with our customers, all of which contribute to a true understanding of what the technology can deliver. The result is shared knowledge, fast-track processes, and the assurance that business interruption is minimized and controlled. All before you undertake an effort that will affect entire divisions, if not your entire company. It's a competitive advantage that is difficult to overlook.

The "Power of Three"

When your organization embarks on broad-scope business and technology change, the Power of Three—Accenture, Avanade, and Microsoft—provides comprehensive assistance. From strategic planning to seamless delivery, the Power of Three offers end-to-end solutions with the focus and dedication you demand.
