Become cyber-resilient in the Microsoft cloud

Avanade's Cloud Security solutions

Cloud adoption is driving organizations to rethink their business – and their security posture. The cloud unlocks new opportunities to transform operations and modernize services, while at the same time changing the security paradigm. From misconfiguration, to data loss, to outdated tools and processes, organizations are finding it impossible to address new security requirements with legacy approaches alone. Avanade can help close the gap, leveraging our end-to-end Cloud Security solutions to give the insights, implementation support and managed services you need to securely harness the innovative potential of the cloud, transform applications and stay secure and compliant on the Microsoft platform.
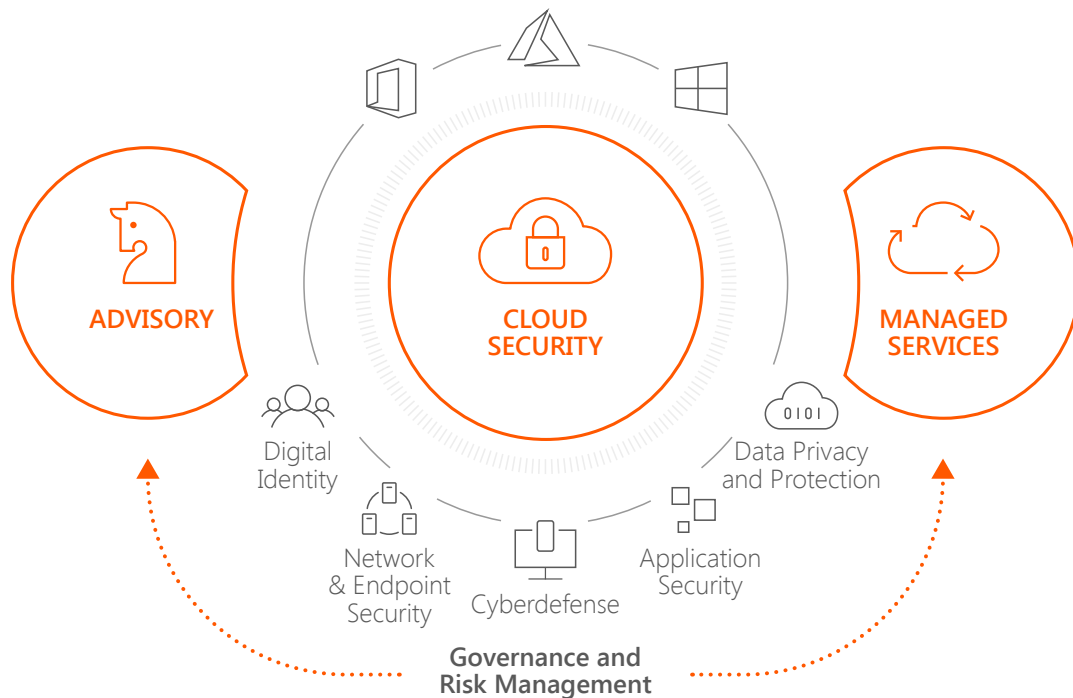

Benefits of Avanade's Cloud Security solutions:

- **A clear assessment:** Uncover and chart the steps to a mature cloud security posture.

- **Secure Azure:** Build and implement core and advanced Microsoft Azure services with the required compliance, governance and controls.

- **Cloud identity:** Modernize identity and access management services in the cloud, starting with Azure Active Directory.

- **Protect apps:** Transform application development in the cloud with stronger security standards and business processes.

Introducing Avanade's Cloud Security solutions

Avanade's Cloud Security solutions enables you to fully unlock the business benefits and advanced security capabilities of the Microsoft cloud, with confidence. As a global solutions provider, we combine our deep Microsoft expertise, end-to-end capabilities and industry-specific offerings to ensure you have the right technology, processes and organizational structure in place, helping you be cyber-compliant and cyber-resilient in the Microsoft ecosystem.

Security is required at every step of the cloud journey.

There are numerous paths organizations take for cloud migration, from a full-scale adoption of public cloud, to modernizing application development, to optimizing existing investments. In every case, businesses need to rethink their security posture, as evolving threats and operational challenges emerge. In fact, 91% of organizations are concerned about cloud security[1], citing misconfiguration errors, data leakage and lack of adequate tools as their top challenges. Traditional legacy solutions no longer provide adequate controls or confidence. A new approach is needed to embrace the cloud, securely.

48% of executives say security threats are evolving faster than security technologies. – Avanade Hot Topics Survey 2019

Organizations can't solve cloud security challenges alone.

Unfortunately, most organizations don't have the experience, expertise or tools needed to understand their cloud security needs, much less put into action a plan to address them with the right people, processes and technology. Doing so requires a comprehensive cloud maturity assessment, followed by a dedicated, long-term strategy for implementing the right solutions and managing them, securely and effectively, to achieve the true business value of the cloud.

Helping organizations be cyber-compliant and cyber-resilient in the Microsoft ecosystem.

Avanade's Cloud Security solutions give your organization the insights and support it needs to securely evolve in the Microsoft cloud ecosystem. With our help, you will be able to update your security posture and transform operations to unlock the full business value of your cloud implementations, while reducing risk and strengthening your defenses. In line with your industry requirements, we will help you map out the path to cloud security and move from point A to point B (and beyond), quickly and confidently, with a transformative, modern approach.

By 2020, **80%** of cloud breaches will be due to customer misconfiguration, mismanaged credentials or insider theft, not cloud provider vulnerabilities. – Gartner

Where does your cloud security journey begin?
Avanade helps transform your cloud security posture, at every step.

Capabilities	Benefits
Security Advisory	With our upfront Cloud Security Maturity Assessment, we'll help you: • Assess your cloud security posture across technology, processes, people, standards and organizational capabilities • Develop a clear shared responsibility model with cloud providers • Select and plan for the right technology solutions – and put in place an effective change management strategy
Build and implement Azure baseline services	Our team of Microsoft cloud security experts provides extensive build and implementation services, letting you: • Implement Azure baseline services with the right compliance, governance and controls, tailored to your industry • Increase your ability to detect, prevent and react to advanced threats • Evolve operations to run and manage services securely and across hybrid environments • Learn how Avanade has successfully delivered solutions across global clients
Extending identity management into the cloud	Identity is at the heart of most major Microsoft cloud transformations. Avanade enables you to: • Put identity at the center of your modern security strategy • Upgrade infrastructure to extend identity and access management services into the cloud, starting with Azure Active Directory • Control and manage access to your data to prevent breaches and fortify your defenses
Azure Managed Services	Reimagine cloud security as a fully managed, consumption-based, as-a-service model, so you can: • Optimize the protection of users, data and devices with monitoring, incident response and reporting • Remain always up to date with the latest security advancements • Leverage analytics and insights to extend your capabilities to focus on the highest priority risks and threats, proactively • Free your IT team from mundane and repetitive management tasks, so they can focus on innovation
